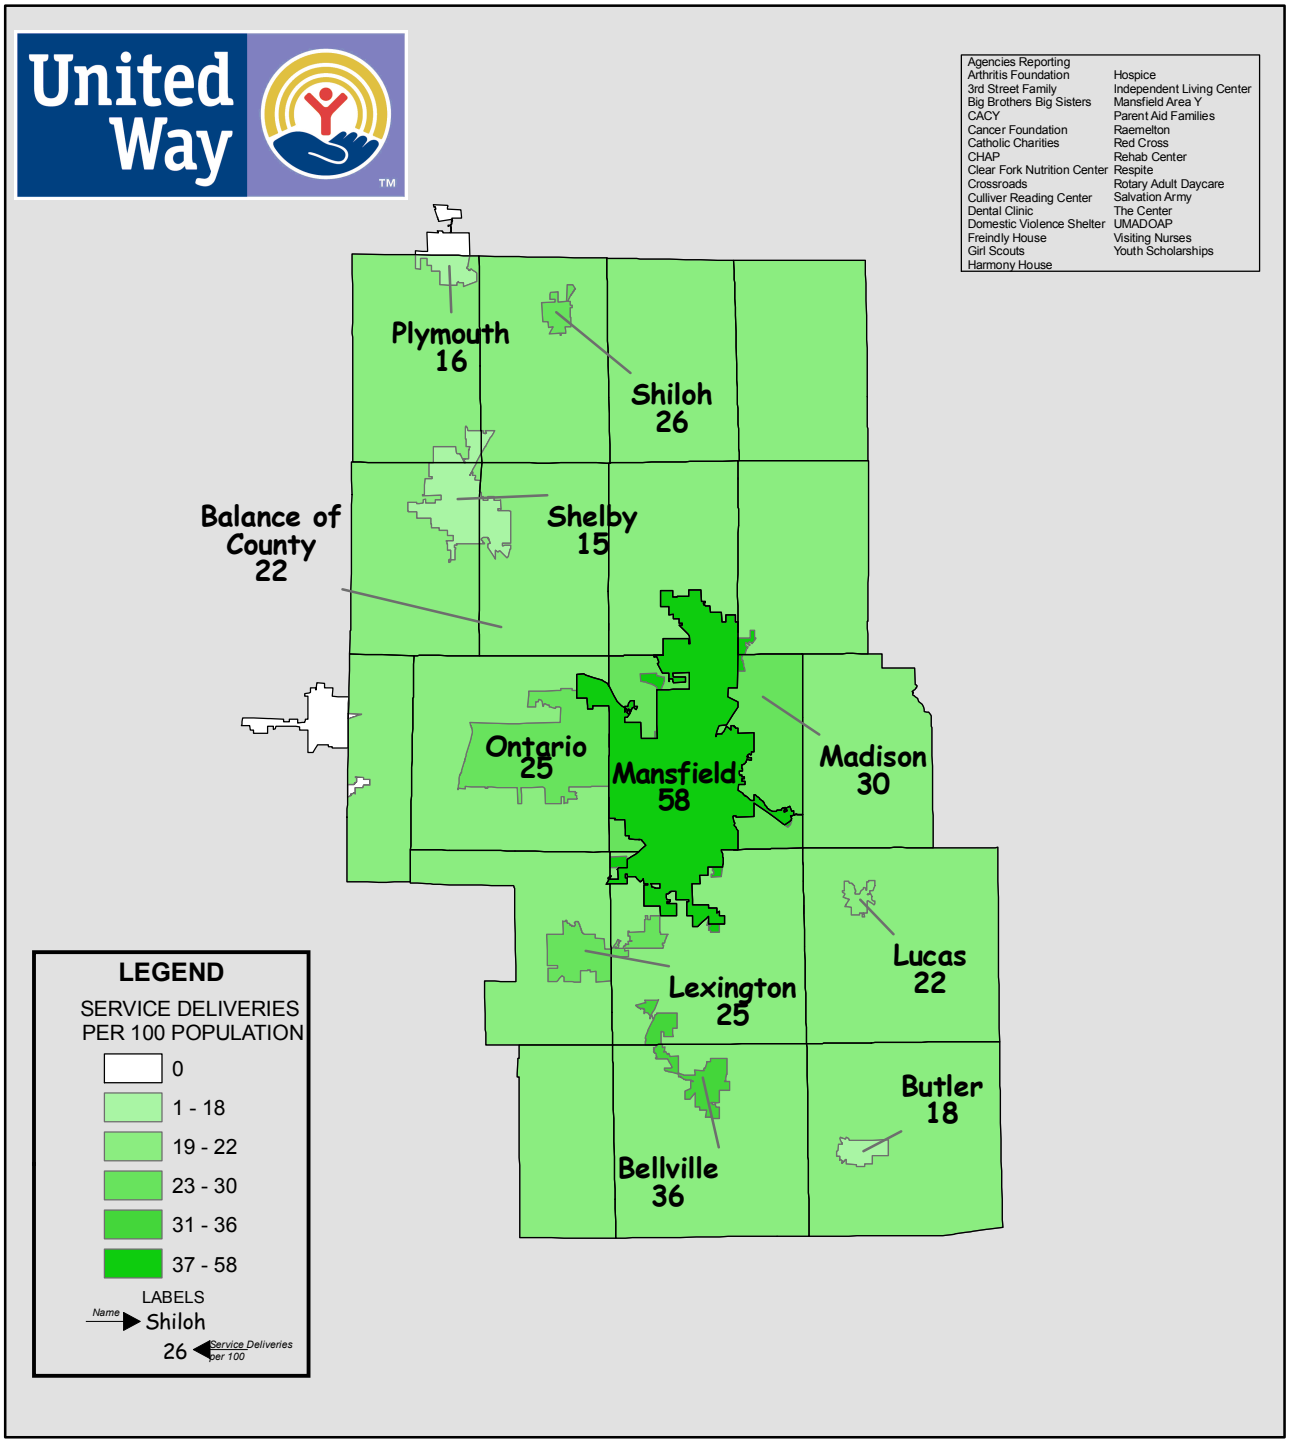
RICHLAND COUNTY UNITED WAY PROVIDES SERVICES COUNTYWIDE

Access to United Way Services
Service Deliveries per 100 Persons
2008-2009



EXPLANATION:
This map seeks to graphically represent the approximate geographic distribution of United Way services throughout Richland County. United Way Agencies were asked to provide a breakdown of their services geographically. Service deliveries were then totaled by geographic area and compared to the 2000 population of each area per 100 persons. The resulting figure shows the degree to which persons in a community are accessing United Way services.

A service delivery may not be a single person receiving a single service. For example, five service deliveries may mean five different persons receiving a service or it may mean one person receiving a service five times. A single individual in an area may also be receiving services from more then one agency and is therefore represented in the tally several times.

In cases where agencies submitted address or street information Geographic Information technologies (GIS) was used to geocode these points onto street files and then aggregated by municipality. Individual maps showing geocoded address points have been suppressed and will not be released due to privacy considerations. In cases where an agency presented zip code, school district or census tract figures, GIS technology was used to overlay these boundaries with the municipal boundaries and intersect them creating new polygons. Next population percentages were computed for each polygon and were applied to the service figures and totaled by municipality. Richland County United Way has on file a supplemental document to this map which discusses methodology used to distribute service numbers for each agency

1 inch = 6 miles
